

Custom Finishes Guide

Bio-AM™

Nano-Tex® with Bio-AM™ provides the high-performance spill and stain resistance with a non-leaching antimicrobial that controls microorganisms that cause odors and stain and it slows the degradation of products.

CRYPTON®

Crypton® is the only textile solution offering permanent stain, moisture, mildew, bacteria and odor-resistant protection and delivers a formula that's better for the environment and is capable of meeting extreme durability and long-term performance standards promised by a Crypton® product. Crypton® technologies are GREENGUARD Gold Select Certified.

INCASE™

InCase™ gives fabrics superior cleanability that's customized for their end use. It's perfect when you need to resist spills, stains, odors and microbes, but do not require a moisture barrier. InCase™ provides multiple levels of fabric protection thanks to advanced, environmentally friendly formulations and the use of Silver Ion Technology and is GREENGUARD Gold Certified. Will help pass most all FR requirements. (CAL 133, Boston Fire Code, IMO, Crib 5)

DURABLOCK®

Formerly called NANOBLOK + NANO-TEX, DuraBlock® is a liquid barrier (backing) that can be combined with Nano-Tex® for added performance. Even under high pressure, no liquid can travel through the treatment into the cushion.

ENVIROSEAL®

Nano-Tex® with EnviroSeal® is a technology designed to aggressively repel liquids and stains. The finish dramatically improves a fabric's durability and meets the requirements for MBDC Cradle to Cradle certification.

ENVIROCOAT®

EnviroCoat® is a 100% Polyester back coating for fabric and is intended to replace Acrylic and Latex backings and is 100% recyclable. This product is laminated to the back of a fabric, creating a fabric that repels liquids and stains. Meets the requirements for MBDC Cradle to Cradle certification.

GREENSHIELD®

Greenshield® is Nanotechnology that attaches tiny nanoparticles to fabric to help create moisture and stain resistance. This process uses 7-10 times less the amount of fluorocarbons as similar fabric finishing in the industry. This finish is chemically bonded to any fabric that can withstand 250 degrees Fahrenheit washing, and lasts the life of the fabric.

NANO-TEX®

High performance nano technology that builds permanent stain protection into the molecular structure of the fabric. Nano-Tex® covalently bonds to the fiber of the textile and lasts the life of the fabric. It is effective at preventing fabric stains from dirt and spills including coffee, soda, wine, mustard, salad dressing, blood, urine and iodine.

Additional custom finishes and backings may be available. Minimum quantities and extended lead times may apply. Please contact your sales representative or customerservice@momtex.com with any questions.
